**LECTURER : DR FARASHAZILLAH YAHYA**

**SYSTEM TITLE: COMPLAINT MANAGEMENT SYSTEM**

**GROUP MEMBERS :**

| <b>NAME</b>                                    | <b>MATRIC NO</b>                                                                      |
|------------------------------------------------|---------------------------------------------------------------------------------------|
| <b>1. SYAZA SYAZANA BINTI ANWAR</b>            |   |
| <b>2. DORINA SHARLENE</b>                      |  |
| <b>3. NORSYLAH BINTI SAFRUDIN</b>              |  |
| <b>4. GLORIA BINTI FRANCIS</b>                 |  |
| <b>5. WAN NURADRIANA BALQIS BINTI WAN AZMI</b> |  |

**LIST OF MODULES:**

- 1. User Registration Module (Dorina Sharlene)**
- 2. Complain Categorization Module (Gloria binti Francis)**
- 3. Complain Investigation Module (Syaza Syazana binti Anwar)**
- 4. Complain Resolution Module (Wan Nuradriana Balqis binti Wan Azmi)**
- 5. Reporting Module (Norsyiah binti Safrudin)**

## **1. User Registration Module**

Users' information must be required through the system so that they can be identified unambiguously and perform the required group action as real potential. On the other hand, many things require measurement, regardless of where we refer to him. A user can view a few options and pages without registering, such as landing on the home page and reading the features, but he is unable to utilize them. In order to use it, he must first register. One person must enter all of the details correctly and precisely because this will aid in identifying them and convincing them that he is the genuine person who has booked. Following registration, one will register within the system as the system's operator or on behalf of the user. When he does this, he has access to the opposite helpful interfaces for any actions. Users must log in using their unique identities and passwords. They will then be directed to the primary user interface, where they will have additional options.

## **2. Complaint Categorization Module**

This module focuses on organizing and categorizing complaints into different types or categories within the complaint management system. This module allows administrators or authorized users to manage the complaint categories. The primary function of this module is to provide a structured framework categorizing complaints based on their characteristics or types, enhancing consistency and accuracy in the categorization procedure. Moreover, this categorization procedure supports reporting and analysis, facilitating the generation of insights and meaningful conclusions based on the complaint types. Thus improving the efficiency of the complaint handling process.

## **3. Complain Investigation Module**

Staff members who are in charge of investigating complaints use this module. It offers resources for looking over and evaluating complaints, including search and filtering capabilities. Additionally, the module might give investigators access to information about previous complaints so they can spot patterns or trends.

#### **4. Complain Resolution Module**

This module is used by employees who are in charge of handling complaints. It includes tools for developing and implementing action plans to address complaints. The module also allows staff to interact with complainants about the status of their complaints and track the implementation of these plans. In this module after the user key-in their complaint they can trace back the history for the complaint.

#### **5. Reporting Module**

By adding this module, administrators can create reports on data related to complaints, including the quantity and variety of complaints received, the typical time it takes for a complaint to be resolved, and the most frequent problems raised.
